

Project Title: _____

Team Name: _____

Target Industry: (e.g., Fintech, Healthcare, EdTech) _____

Team Members: _____

1. The Core Problem (The "Why")

In 2–3 sentences, what specific real-world pain point are you solving? Who suffers from this most?

2. The Solution & Value Proposition (The "What")

Describe the app. How does it solve the problem above? What is the single most important benefit for the user?

3. The AI Trinity Strategy (The "How")

Explain how the project utilizes these three pillars to create a "moat" or a superior experience:

- **LLM (Intelligence):** Which foundation model are you using, and what is its primary role (e.g., reasoning, summarization, translation)?
- **RAG (Knowledge):** What specific data or documents will the AI "read" to provide accurate, non-generic answers?
- **Agents (Action):** What autonomous task will the AI perform? (e.g., "The agent will automatically book the appointment," "The agent will generate a report and email it to the manager.")

4. Market & Competition

- **Primary User:** (e.g., Small business owners, university students, etc.)
- **The Advantage:** Why is your AI solution better than a simple search engine or existing non-AI software?

5. Execution Plan (High Level)

- **Core Stack:** (Frontend / Backend / Database)
- **Risk Factor:** What is the biggest technical or data challenge you expect to face?
